

QA Bug Report

Web Application: SauceDemo (www.saucedemo.com)
Prepared by: Manhoj T | Date: May 21, 2026

1. Overview

This report documents QA findings from manual testing of the SauceDemo web application (<https://www.saucedemo.com>), a demo e-commerce platform. Testing covered key user flows including login, product browsing, cart management, checkout, and logout. A total of 8 issues were identified ranging from Critical to Low severity.

2. Bug Report Table

#	Title / Summary	Steps to Reproduce	Expected vs Actual	Severity	Suspected Cause
1	Checkout allowed with empty cart	1. Add item to cart 2. Go to cart 3. Remove item 4. Click Checkout	Expected: Checkout disabled or error shown. Actual: Checkout proceeds with empty cart.	CRITICAL	No cart validation before routing to checkout page
2	No search/filter on product listing	1. Login 2. View product listing page 3. Look for search bar	Expected: Search bar to filter products. Actual: No search functionality present.	HIGH	Feature not implemented in frontend
3	Cannot change item quantity in cart	1. Add item to cart 2. Open cart 3. Try to change quantity	Expected: +/- quantity controls. Actual: No quantity change option.	HIGH	Quantity control component not built
4	No delivery date shown after checkout	1. Complete full checkout flow 2. View confirmation	Expected: Estimated delivery date shown. Actual: No date displayed anywhere.	MEDIUM	Order confirmation page missing delivery info
5	No order status or tracking after purchase	1. Complete checkout 2. Look for order status/tracking	Expected: Order status visible. Actual: No status or tracking shown.	MEDIUM	Post-order tracking feature not implemented
6	No password strength indicator on login	1. Go to login page 2. Type in password field	Expected: Password masking or strength hint. Actual: No indicator visible.	MEDIUM	Input field may missing type="password" styling
7	No show/hide password (eye icon) after wrong attempt	1. Enter wrong password 2. Enter correct password 3. Check for eye icon	Expected: Toggle to show/hide password. Actual: Eye icon never appears.	LOW	Toggle feature not implemented in UI
8	No success message on logout	1. Login successfully 2. Click logout 3. Observe feedback	Expected: "Logged out successfully" message. Actual: Silent redirect, no feedback.	LOW	Missing toast/notification on logout action

3. Root-Cause Analysis — Bug #1: Checkout Allowed With Empty Cart

What is happening: When a user adds a product to the cart, then removes it, and clicks the 'Checkout' button, the application does not block the action. The user is allowed to proceed through the entire

checkout flow despite having zero items in their cart.

Why it is happening: The checkout button lacks a validation check against the current cart state before navigating to the next screen. There is no conditional guard such as *if (cartItems.length === 0) { show error }* implemented in the frontend logic. Additionally, the backend appears to accept the order submission without verifying that at least one line item is present.

Impact: This is a Critical severity bug because it can result in empty orders being submitted, causing confusion for both users and backend order processing systems. In a real e-commerce environment, this could generate invalid orders, waste support resources, and degrade user trust.

How to fix it: The fix requires two layers of protection. First, on the client side, the Checkout button should be disabled (greyed out) reactively whenever the cart item count reaches zero, with a tooltip message such as 'Add items to proceed'. Second, on the server side, the order submission endpoint should validate that the cart contains at least one item and return a 400 Bad Request response with a descriptive error message if not. This two-layer approach ensures the bug is caught even if the frontend validation is bypassed.

4. Summary

Severity	Count
Critical	1
High	2
Medium	3
Low	2
Total	8
